Handout for KoBo Toolbox

This course content has been developed by Adroit Associates using online material and projects data available with us. Adroit Associates is an international development consulting firm that specializes in using research, evaluation, and management consulting to promote more prosperous economies and more resilient societies in underdeveloped, fragile states with a particular focus on post-conflict environments. We collaborate with governments, global aid and development organizations, and corporations to make international development more effective, efficient and sustainable – for the people. Our "Results Driven" culture encourages planning and delivering tangible and measurable results at all levels, while our "Impact Focused" approach to solution design and execution ensures our work meaningfully contributes to the transformation of lives in the communities which we serve

1. INTRODUCTION TO THE KoBo Toolbox

I. What is KoBo Toolbox?

KoBo Toolbox is a free open-source tool for mobile data collection. It allows to collect data in the field using mobile devices such as mobile phones or tablets, as well as with paper or computers.

There are two separate instances of KoBo Toolbox for humanitarians and other (researchers) users:

1. kobo.humanitarianresponse.info
2. kf.kobotoolbox.org

II. Why KoBo Toolbox?

It is a ready-to-use all-in-one platform for developing, storing, managing and sharing forms, as well as managing and sharing collected data. It is being continuously improved and optimized particularly for the use of humanitarian actors in emergencies and difficult field environments, in support of needs assessments, monitoring and other data collection activities. It is **free**. All humanitarian actors can create accounts on the dedicated server and use them without limitations on data or time. There is no need to install any server.

KoBo Toolbox supports the full data collection cycle from designing to data collection and analysis.

III. Available Features in KoBo Toolbox

1. Form builder:

The form builder is fully compatible with XLSForms, allowing a flexible interchange between the formats at any stage of form design, and a seamless transfer of previously designed XLSForms into KoBo Toolbox.

2. Question library:

The form builder integrates a question library, which allows prepared questions to be rapidly identified and inserted into a form as it is designed.

3. Android- or browser- based data collection:

Data collection via both methods is fully supported offline as well as online.

4. Data submission:

When offline, data is stored locally on both the app or browser, and then submitted directly to the server whenever an internet connection becomes available.

5. Data management:

The Toolbox allows aggregation, editing and annotation of the data directly within the platform, as well as mapping of geo-referenced data and photo display.

6. Data download:

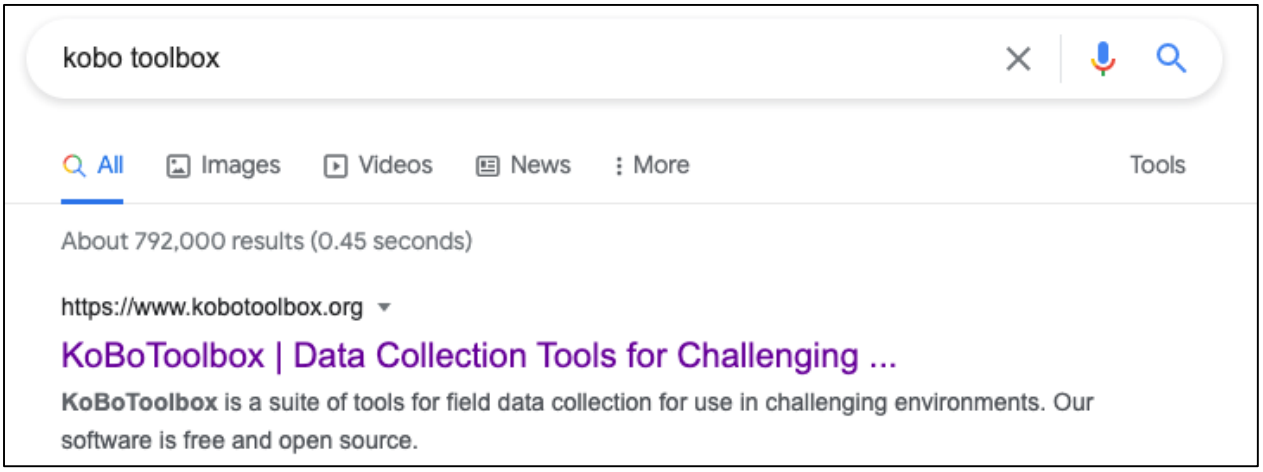

Data can be downloaded in a number of formats - XLS, CSV, and etc. (if GPS data was collected), ready for analysis in Excel, SPSS, or other statistical packages.

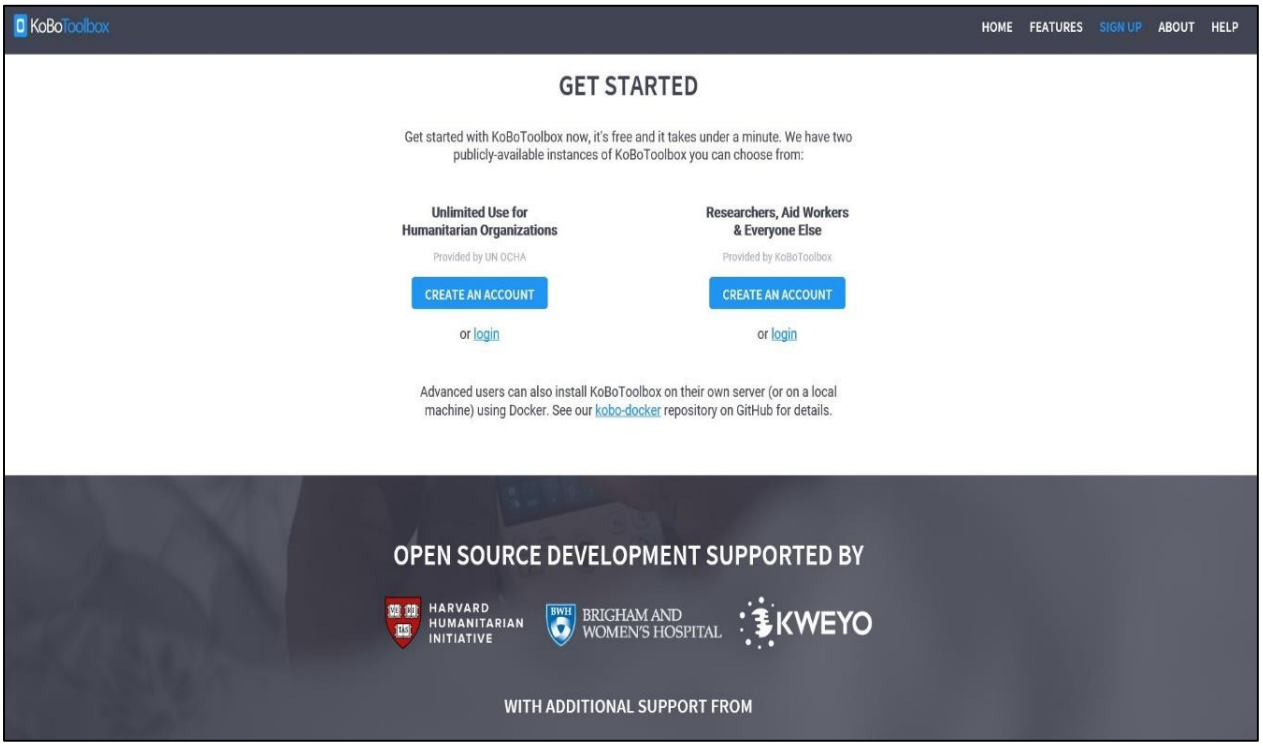

7. User access control:

Users create separate accounts and their forms and data are inaccessible to other users and system administrators. Forms and project data can be shared with other users with multiple permission options.

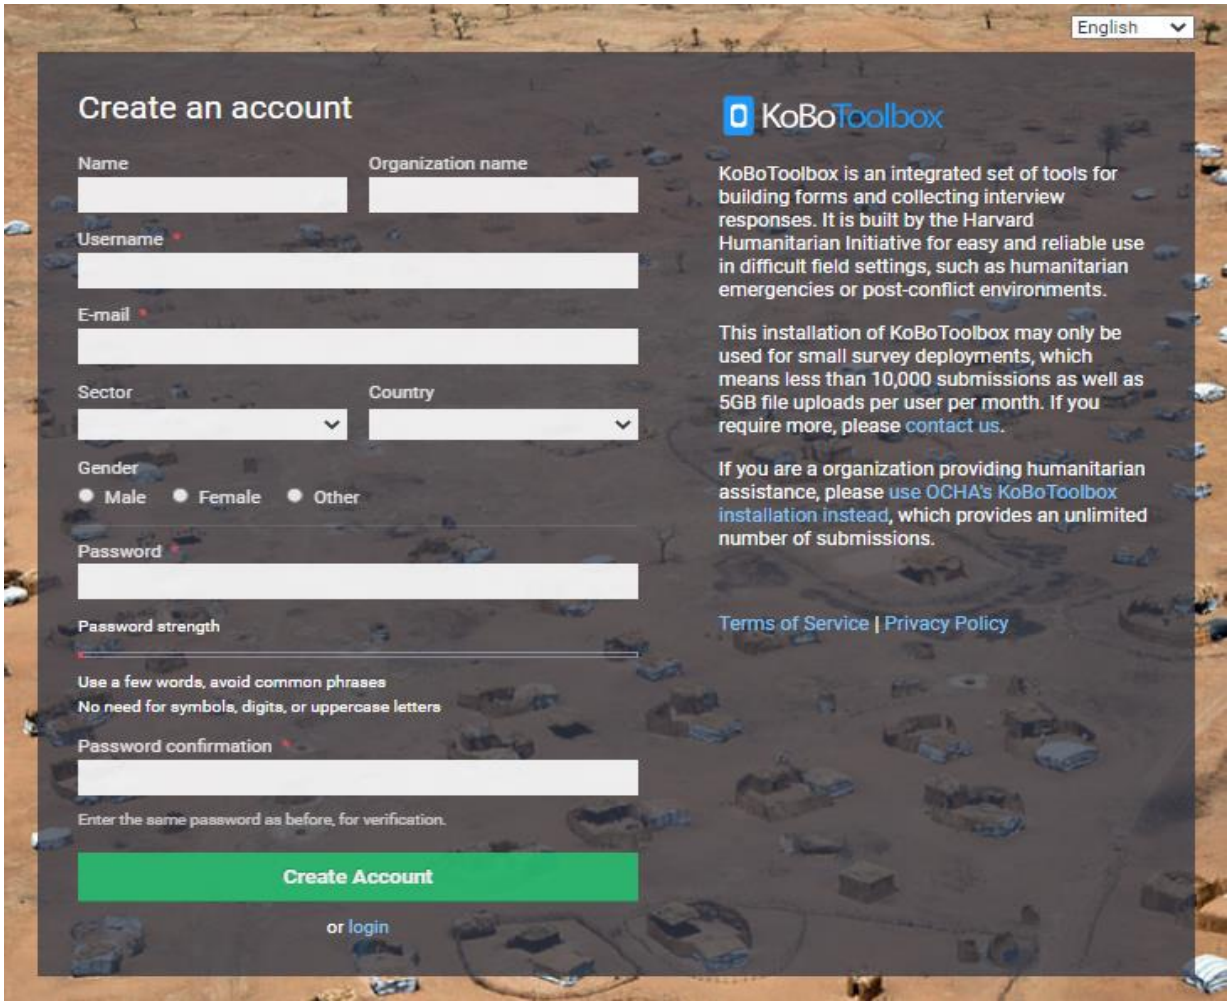

2. CREATE AN ACCOUNT IN KoBo Toolbox

Type "KoBo Toolbox" in the google search. Click on the "KoBo Toolbox"

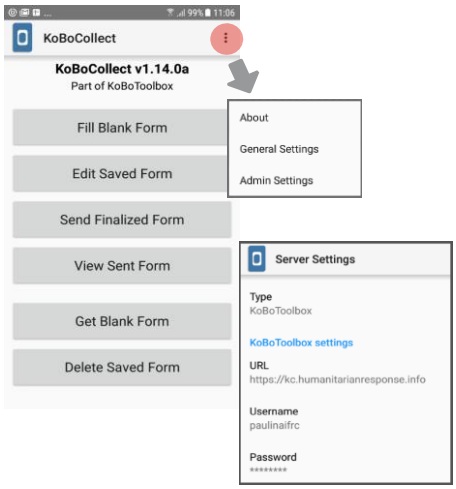

Create an account in the KoBo Toolbox; fill the blanks.

3. KoBoCollect APPLICATION INSTALLATION

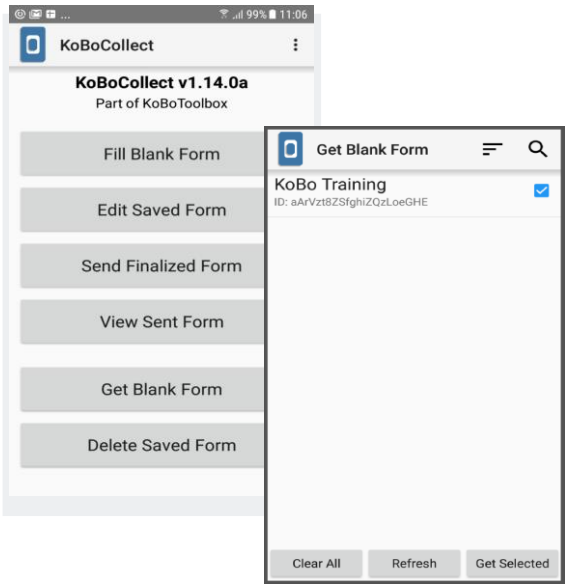

After installing KoBoCollect, you need to configure it so that it can be used together with your KoBo account for data collection:

1. Install KoBoCollect on your Android device.
2. On your Android device, open KoBoCollect and open the General Settings (this may be in the top right of your screen, the bottom right, or a button in the center bottom - depending on your Android version).
3. In General Settings, under URL, enter the server URL https://kc.humanitarianresponse.info or https://kc.kobotoolbox.org
4. Still in General Settings, enter your username and password.

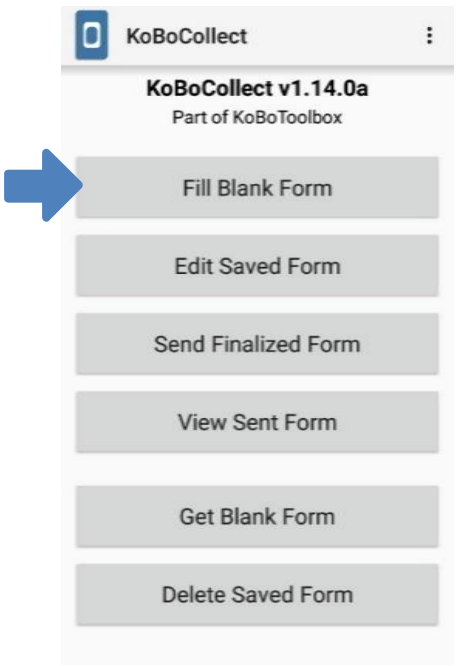

These instructions are also listed on the Form page after you have deployed your project. To download forms from your account and start data collection, follow these steps:

1. Make sure you are connected to the Internet on your device. Also, you need to have deployed at least one project in KoBo Toolbox
2. On the home menu of KoBoCollect, click Get Blank Form
3. A list of all your forms from your different projects will be shown. Select the ones you wish to download) and click Get Selected

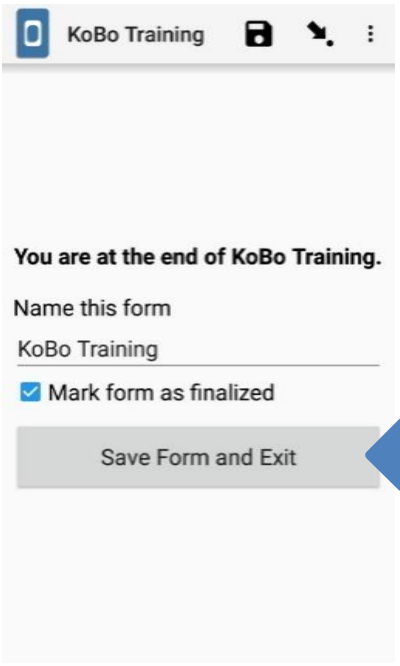

To collect data:

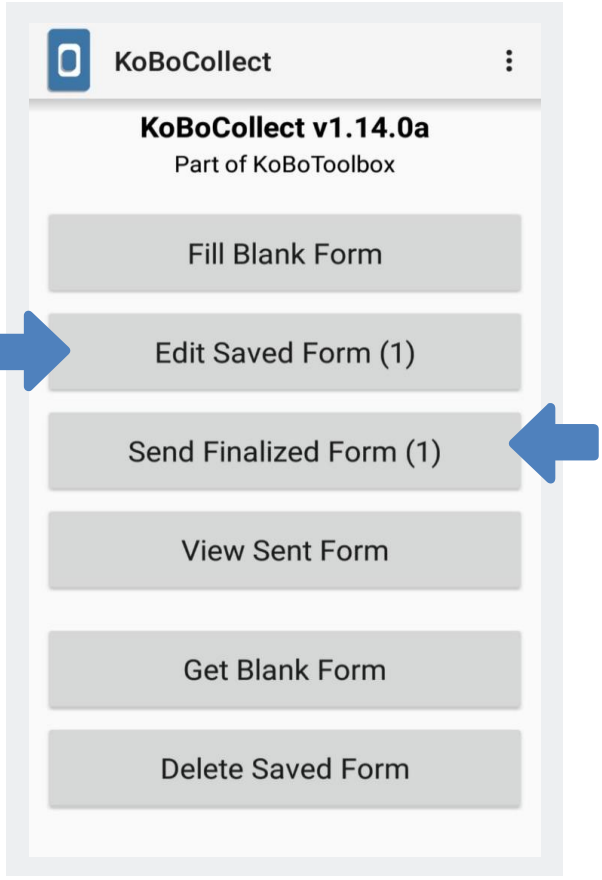

1. Click on Fill blank form.
2. Select the form to which you would like to enter data.
3. Go through all the questions (swiping your finger from right to left).
4. At the end click on Save Form and Exit (making sure the form is marked as 'finalized').

Forms can be edited before sending

Uploading finalized data

1. From the home screen, click on Send Finalized Form.
2. A list of your most recently collected forms appears.
3. Click Select all (or select the ones you wish to send), then click Send Selected.

4. CREATE & MANAGE PROJECT IN KoBo Toolbox

1. Click on the "New" and then "Build from scratch options". This will help you to upload questions into KoBo Toolbox.

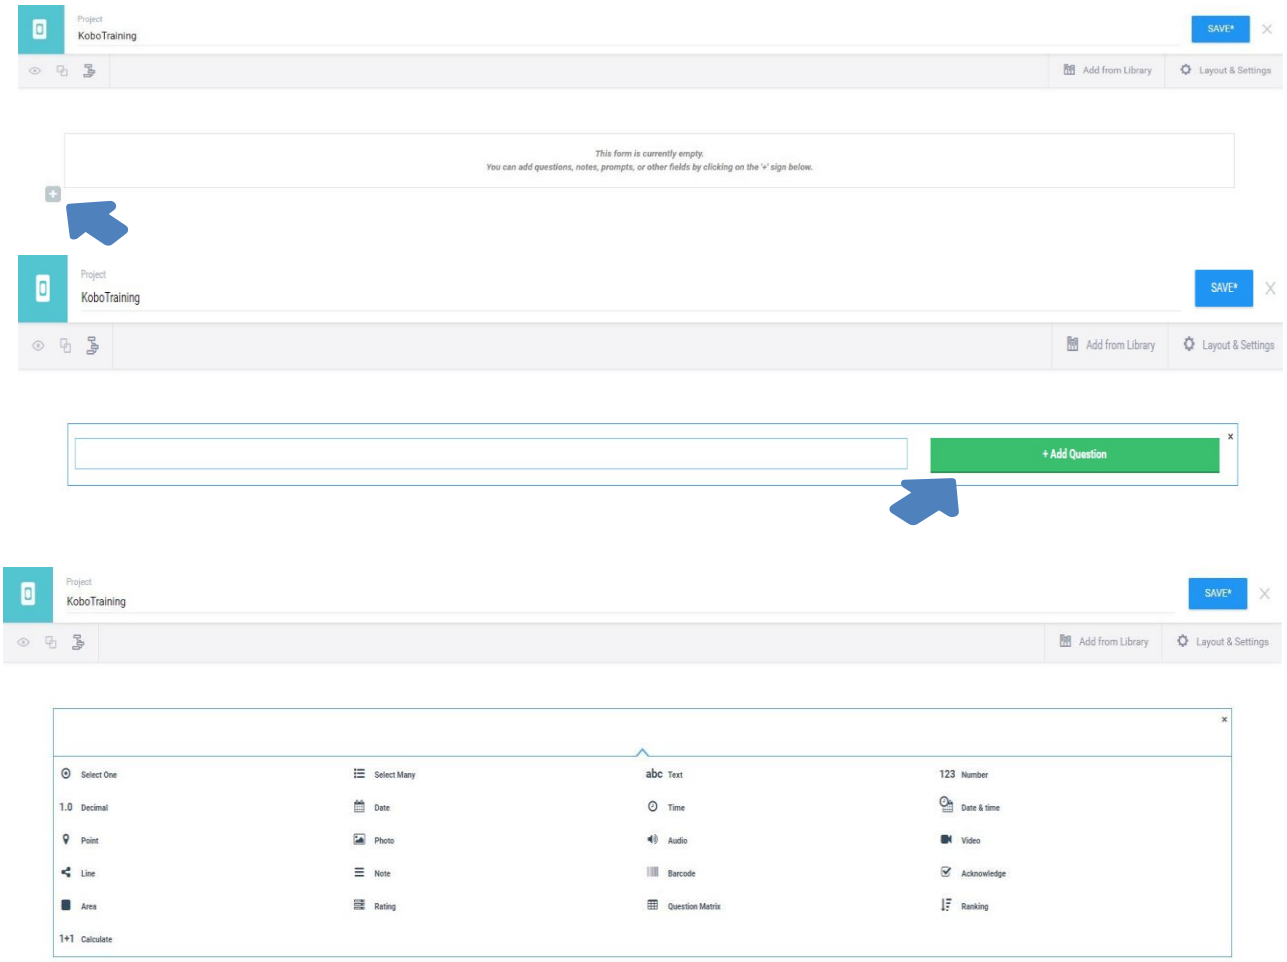

2. Questions Types

	Select One: Multiple choice question; only one answer can be selected.	abc	Text: Free text response.
	Select Many: Multiple choice question; multiple answers can be selected.	123	Number: Whole number input.
	Note: Display a note on the screen, takes no input.		Date: Date input
	Rating: Select one or many responses inside the response		Time: Time input
	Date and Time: Accepts a date and a time input		Point: Collect a single GPS coordinate
	Photo: Take a picture or upload an image file		Video: Take a video recording or upload a video file

3. How to Add Questions

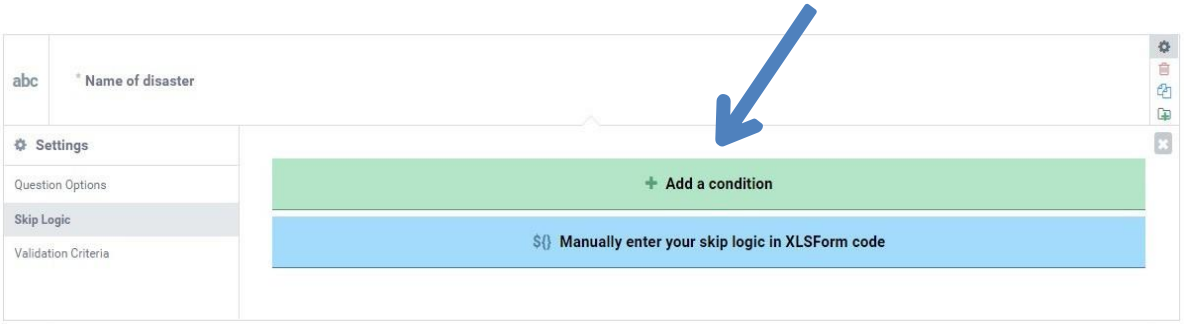

Please take care of the following while doing transcription into the KoBo Toolbox:

- Data Column Name: Please write the DATA COLUMN NAME in English or other language to make sure you download the data and has the relevant column names in Excel
- Mandatory: Please YES, the question which is necessary and has to be responded by the respondents

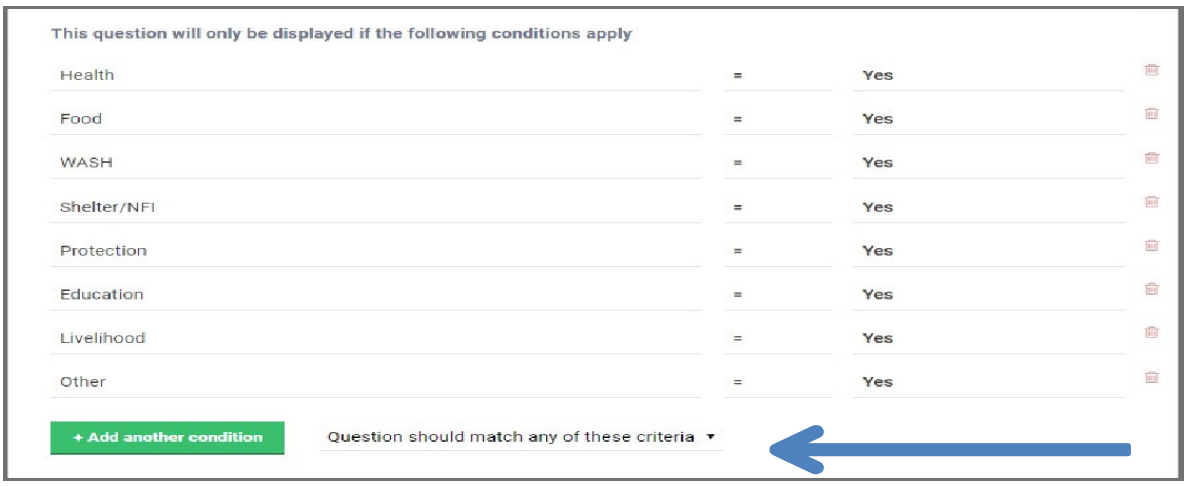

4. Skip Logic

Skip logic controls which question should be displayed only if a certain condition is (or multiple conditions are) fulfilled.

Conditions are always applied to the question or group that should be sometimes hidden, sometimes visible.

5. Validation Criteria

When using two or more conditions, be sure to choose between the two options whether the question should match any (at least one) of these criteria, OR all of them.

5. GOLDEN RULE FOR SURVEY DESIGN _ 03:01pm – 03:30 pm

1. Deploying a Form

Once DEPLOY button is clicked, a form will be live and data collection can begin.

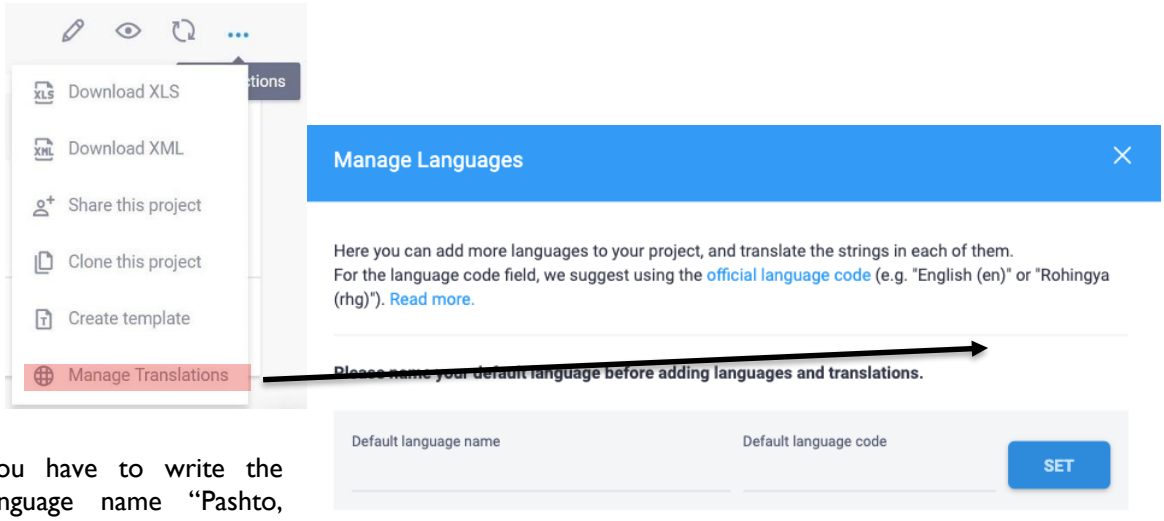

2. Form Management

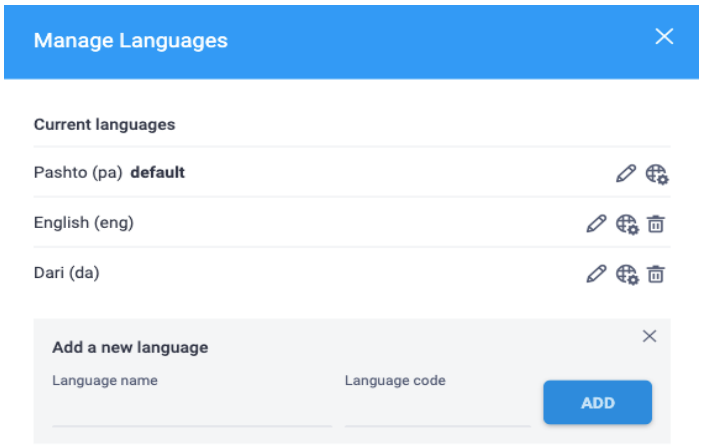

1. **Edit:** When we want to edit the form; we click on this button.
2. **Preview:** Once the form is designed; we click on this button for preview.
3. **Replace Project:** We can replace the form with another form by click on this button.
4. **Download XLS:** When click this button; a form can be downloaded either as XLS
5. **Share this project:** When click this button; additional contributors can be added
6. **Clone this project:** When click this button; a form can be cloned or used as a template. After, this form goes to draft, and we can use it as a template in the future.
7. **Redeploying the Edited Form:** Redeploying the form makes the changes live.
8. **Manage Translation:** When click this button; additional language options for the form can be set up here. We can add both Pashto and Dari languages to the form.

3. Manage Translation in KoBo Toolbox

First you have to set up a default language. It is the language in which the form was initially created.

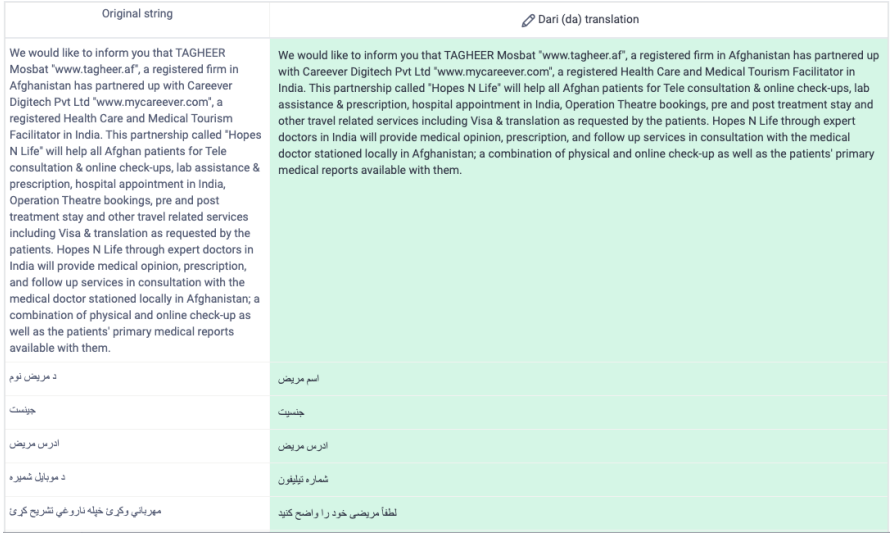

You have to write the language name "Pashto, Dari, or English" in the default language name, and then write the code such as "eng" for English, "pth" for Pashto, and etc.

Once a default language is set up, you can add another language by clicking on "Add a new language".

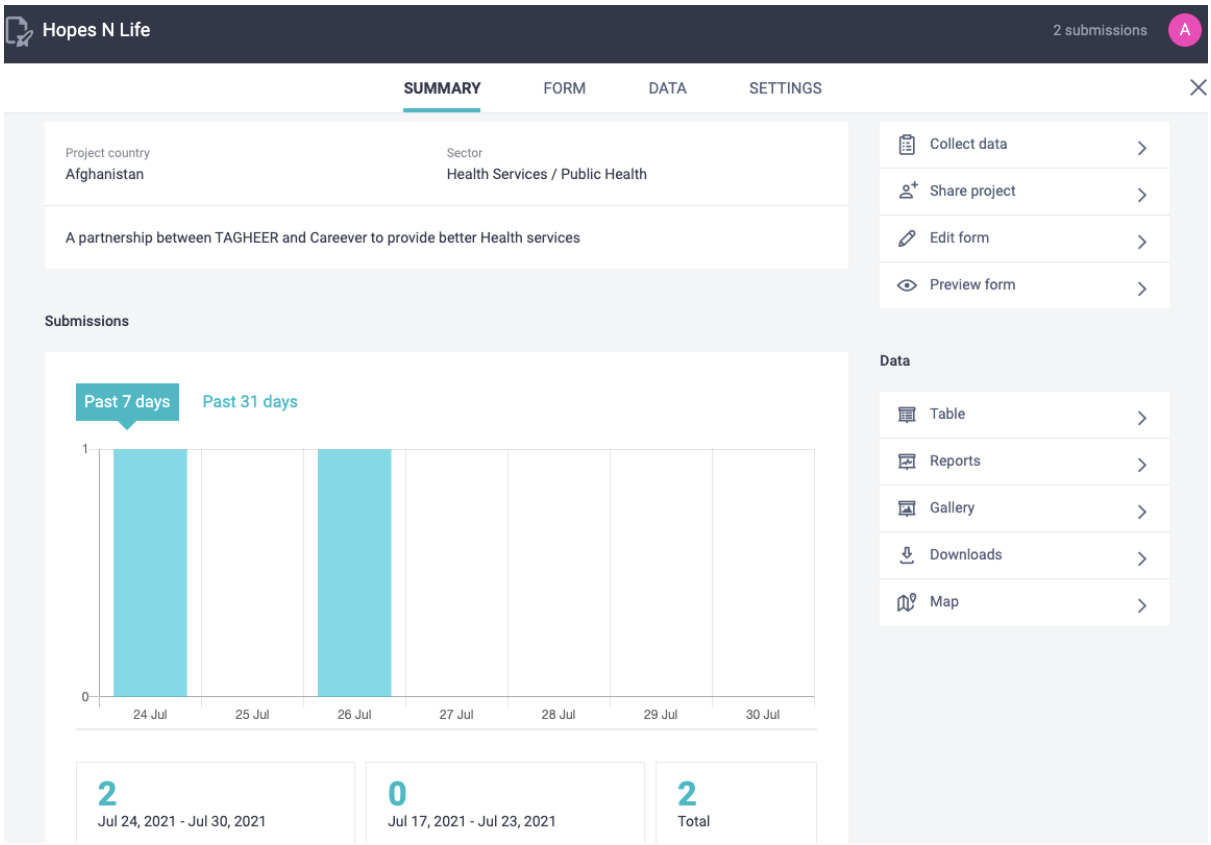

Once another language is added, click on an icon Update translation, simply fill the table with translated text

6. DATA MANAGEMENT, ANALYSIS AND REPORT

1. Summary

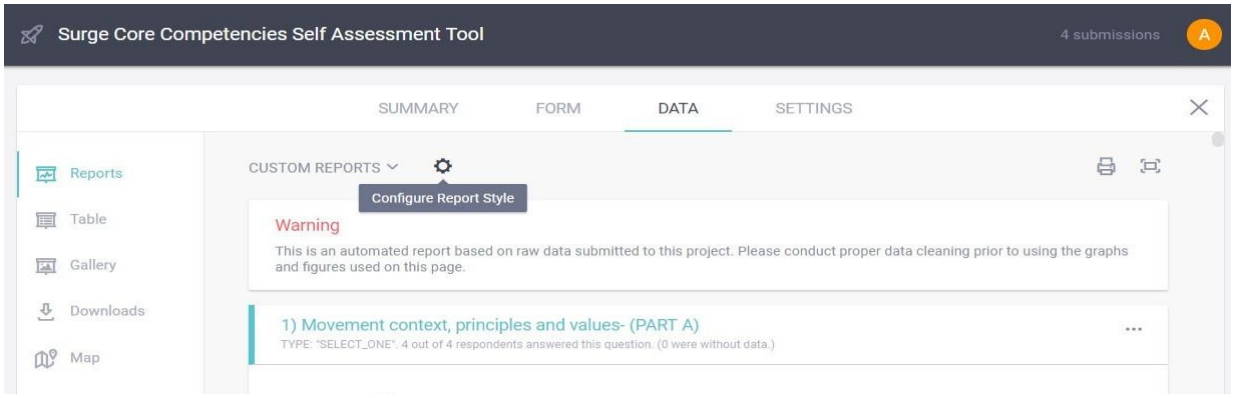

The project summary gives a visual display of the high-level information relating to the project. This includes the project's meta data (description, country, sector), the list of users that have access to this project, and a graph of the submissions over time, giving an overview of how the project is progressing.

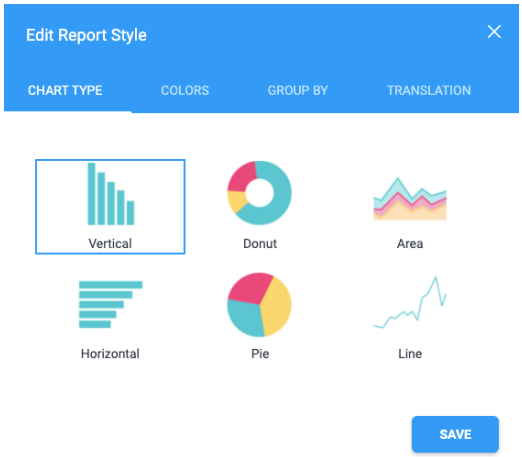

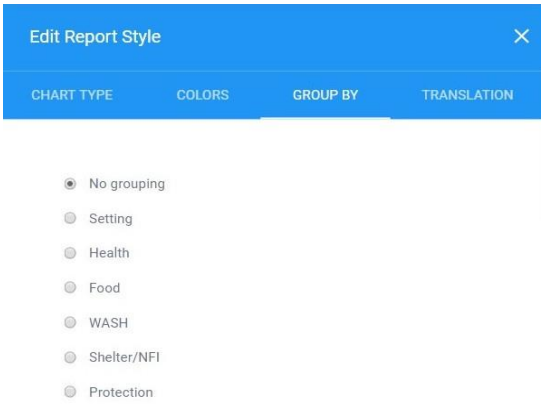

2. Data

The data menu explores the collected data in different formats.

a. Reports: When you click on the "Reports". You can create summary reports with graphs and tables and adjust your report's charts and colors.
    a. It also allows to disaggregate the data in reports i.e., by gender, region or sector - click on GROUP BY.

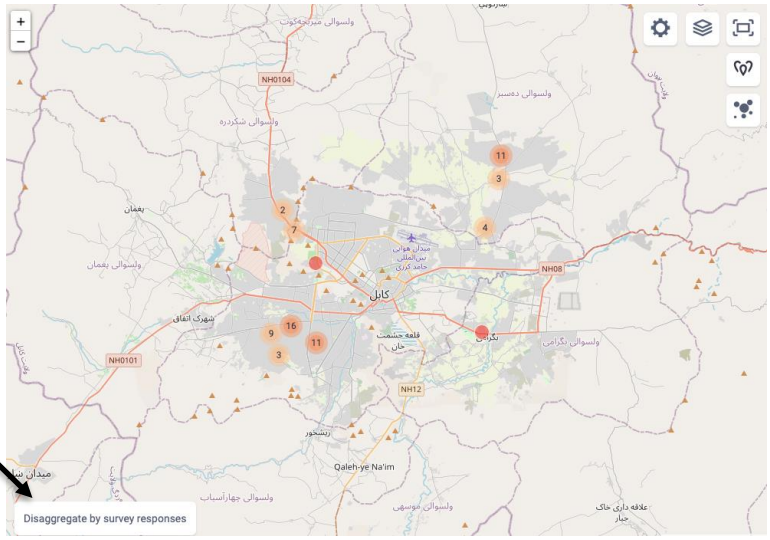

KoBo allows to create custom reports in which users can include only the indicators they are actively monitoring.

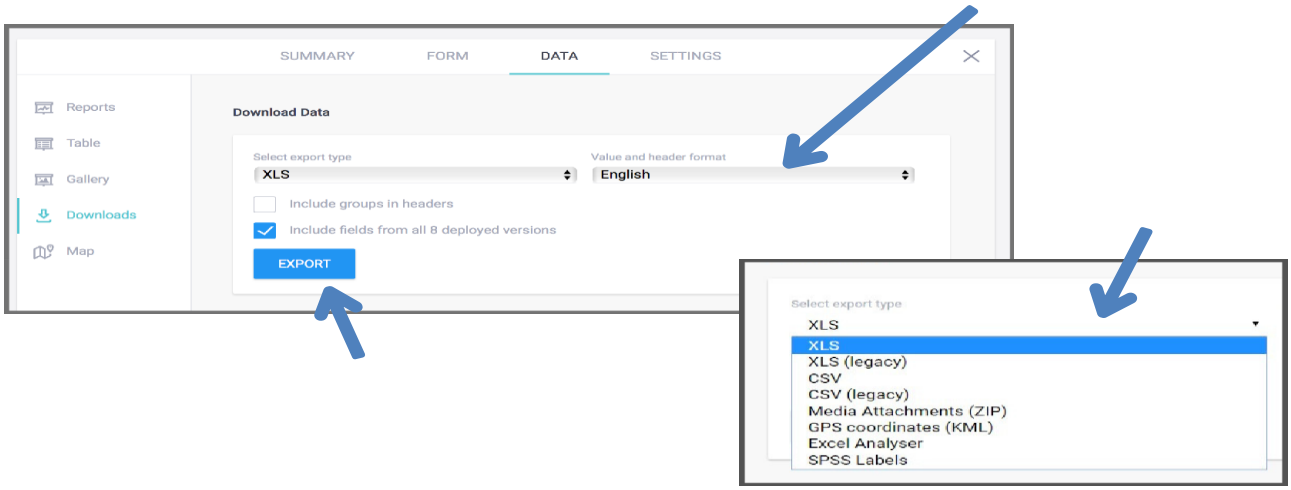

3. Data Map

- Recorded GPS locations can be viewed on a map
- Map can be disaggregated by survey responses such as gender

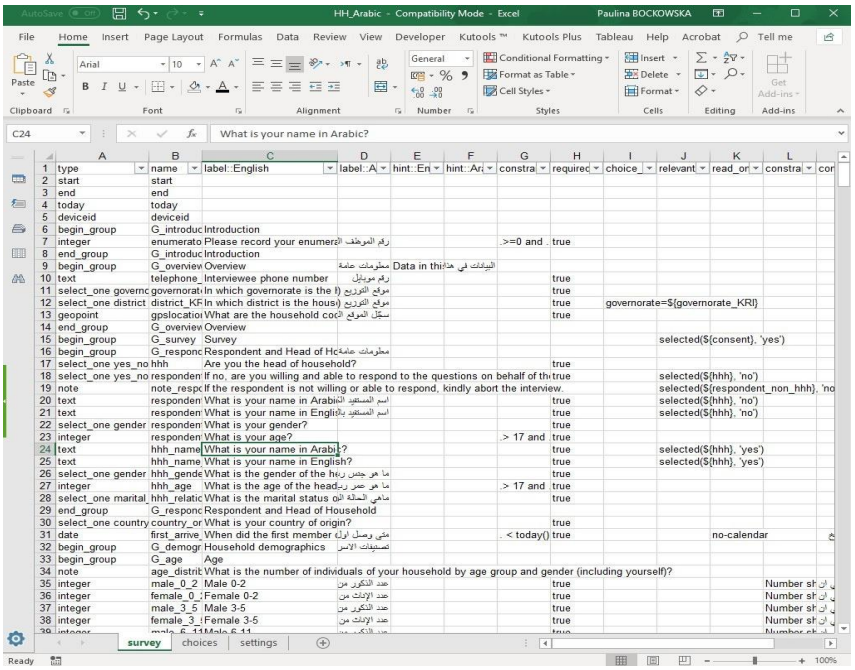

4. Downloading Data

When the form is in multi-language, one can select in which language the data should be downloaded. Data can be downloaded in multiple formats. To download your data, first select the desirable format and then press EXPORT.

7. MANAGE TRANSLATION IN XLS FORM _ 08:00 am – 12:30 pm

Another way to add additional language to the form is by exporting the form to XLS format, making the changes in an application like Excel, and then importing it again.

It allows the transcriber to quickly add all the required translations in Excel - without having to access to KoBo account.

1. Export the form to XLS.
2. Find the column called 'label'. Insert another column to the right of label. In the header (first row) of this new column, write label::language.
3. Then, if you have hints / error messages in your form, the same needs to apply to those columns.
4. Do the same in Choices sheet.
5. Return to KoBo Toolbox and click on "Replace with XLS", then upload your updated XLS Form
